

Written by: Martin Buller

From the creators of 'Halls of the Things;' Invasion of the body snatchas,' and many other software classics come these exciting new games. Games to tax your judgement and puzzle and frustrate you for months on end.
Don't forget our other titles, which have attracted enthusiastic reviews like
"Spectacular, one of the best games I've seen"... POPULAR COMPUTING WEEKLY and
"Excellent, dangerously addictive, could change the Spectrum games scene overnight"... SINCLAIR USER.

Instructions for graphics characters are printed in lower-case letters in our listings. They are enclosed by brackets and separated by colons to distinguish them and the brackets and colons should not be entered.

Inverse characters are represented by the letter "i" and graphics characters by "g". Thus an inverse W would be represented by "iw", a graphics W by "gw", and an inverse graphics W by "igw"

Spaces are represented by "sp" and inverse spaces by "isp". Whenever any character is to be used more than once, the number of times it is to be used is shown before it, together with a multiplication sign. Thus "6*isp" means six inverse spaces and "(g4:4*i4:g3)" would be entered as a graphic four, followed by an inverse four repeated four times, followed by a graphics three.

Where whole words are to be written in inverse letters they appear in the listings as lower-case letters. Letters to be entered in graphics mode on the Spectrum are underlined.

Inverse characters may be entered on the ZX-81 by changing to graphics mode and then typing the appropriate characters and on the Spectrum by changing to inverse video and typing the appropriate letters. Graphics characters may be entered on the ZX-81 by changing to graphics mode and then pressing symbol shift while the appropriate characters are entered. On the Spectrum graphics characters may be obtained by changing to graphics mode and then pressing the appropriate character. User-defined graphics will appear as normal letters until the program has been RUN.

THE NEW COMPUTER GAMES MAGAZINE THAT BREAKS ALL THE RULES

Attention all you pixel-packers,

midnight hackers and binary-bustin' bozos! Gorf's gift to gamesville has just hit the streets. Big K's the name and Big K's the game—it's a new magazine that's going to be music to your micros. Whatever Big K gets in its sights—technical, tactical or just plain old topical, don't expect anything typical. Big K plays it different and says it different. We're not afraid to shoot from the hip—and we're always hip when we shoot! We've a no-holds-barred approach to arcade strategy and adventure that'll have your CRT's tingling. Key in to Big K now for a magazine that puts news, reviews, programs and hardware under your fingertips. After your first byte of Big K...the game will never be the same.

THIS ISSUE: Modem Living – access the world through your micro and telephone – Big K makes the right connections.

 Win a full-sized BATTLEZONE arcade game in Big K's extravagant competition.

• What's all the fuss about? Big K examines the 68000 wonderchip.

• Atari 800XL review.

 7 games programs for Commodore 64, Vic 20, BBC, Spectrum, ZX81, Oric, Atari.

 Atari graphics – read Big K's special feature.
 Plus – Arcade Alley, dozens of games reviews, expert technical features, lots of fun and lashings of colour.

Third amazing issue on sale 17th May

HE OBJECT of The Clown is to answer 20 questions on either addition or subtraction correctly. If you choose to answer subtraction questions, a correct answer will result in a tick being drawn on the screen. Alternatively you can answer questions on addition, in which case a correct answer will result in a smiling clown, whereas an incorrect one will result in a gloomy clown.

The Clown was written for the 16K ZX-81 by David Read of Ashby-de-la Zouch, Leics.

AGF JOYSTICK INTERFACE II 9.95 QUICKSHOT JOYSTICK 8.95 11.95 DISCOUNT VOUCHER IF ORDER EXCEEDS £18 FREE REACTOR centres on the player who is trapped in a nuclear power station. You have to move round the power station in an attempt to find three numbers which make up a code which allows entrance to the control room. Once in the control room you can choose one of two switches. One of those switches will close down the reactor, whereas the other will self-destruct. A reducing water level acts as a time limit, so if you run out of water the game ends.

The code you have to find is random, as are the two control room switches. To aid the search a map of the maze is displayed at the start of the game but the map, which can be recalled at any point during the game, will appear only for a second at any time.

Reactor was written for the 16K ZX-81 by Eliot Groves, aged 14, of Huyton, Merseyside. He has owned his ZX-81 for two years and the program took him approximately four hours to write.

It is good to see that people are still producing good-quality programs for the ZX-81. What is more, this one is written entirely in Basic and Spectrum owners could do worse than use the listing, since very little conversion is needed.

The game is centred on a nuclear reactor and you, the player, have pressed the self-destruct button accidentally. To prevent the disaster of a melt-down, you have to search the maze of corridors for three separate digits of code which will enable you to enter the control room.

Once you have entered the room, you have three attempts to re-arrange the code; if successful, you can enter the reactor where you have to flip a switch—but which way?

The program employs good use of the chunky ZX-81 graphics. When the program is loaded and run, you are confronted with 'windows' showing an enlarged section of the maze—with you in the centre—the reactor, code status and control room door.

You have four controls to move about the game, U-up, D-down, L-left and R right. If you need help you can enter 'HELP' and a map showing where you are as well as the codes will be displayed briefly.

When wandering round, keep an eye on the reactor which is melting; also watch for the radioactive wall.

Lines 9000-9130 display the introduction page and the controls. There is a small delay which is not produced by a pause statement but by the maze being set up in lines 9100-9122. Also the

positions for the pieces of code and the control room have to be set up in lines 9130-9160.

Note that the general-purpose subroutine at lines 9200-9230 ensures that neither the code nor the control room will be positioned on any part of the maze wall or on the player.

The main display is printed at lines 200-220 and the expanded part of the maze is updated in the routine at lines 300-395. The time is checked at that point and a jump is made to lines 2000-2090.

Then T is incremented on every occasion the time is checked and, depending on its value, the reactor core is decremented. If T is greater than 7 a jump is made to line 2100, where you proceed to die.

On the other hand, you are then able to make a move and a small move processor at lines 400-450 checks your input. If you have entered HELP, a jump is made to 665, where the map is displayed. You can cheat by making the map display for as long as you like by entering line 665 IF INKEY\$=""THEN GOTO 665.

That is the main part of the program loop but you still have to check to see if code has been found. That is done at line 500-540 and the code is jumbled in 800-940.

That shuffling is very useful in card games, so study it closely. Finally, 1000-1096 is the last task where you have to choose which switch to press; notice it is random.

The game can be made more interesting by defining your own mazes and because of the way the program is written the task is very simple.

SUBROUTINES AND MAIN CODE

9000-9130 Displays introduction 9200-9230 Sets positions of codes and control room

9135-9160 Inserts code into maze 9700-9780 Prints maze 200-220 Prints main display

Upgrade your 16K ZX SPECTRUM

The "CHEETAH" 32K Rampack simply plugs into the user port at the rear of your computer and increases the memory instantly to 48K.

Fully compatible with all accessories via rear edge connector.

 No need to open computer and invalidate guarantee. Why send your computer away and wait weeks for upgrade.

· Fully cased, tested and guaranteed.

ONLY

inc. VAT and p&p

Why wait any longer?

Now make your SPECTRUM and ZX81 Talk!

The CHEETAH "Sweet Talker" just plugs into the back of the computer using the existing power supply. Based on an allophone system you can easily program any word, sentence or phrase. Fully cased, tested, guaranteed and compatible with all accessories via rear edge connector. Complete with demonstration cassette and full instructions. No more lonely nights!

Terrific Value at £29./5 when ordering please quote whether Spectrum or ZX81 owner.

Also available: 16K Rampack for ZX81 £19.75 64K Rampack for ZX81 £44.75

Prices include VAT, Postage and Packing. Delivery normally 14 days. Export orders at no extra cost. Dealer enquiries welcome. Send cheque/PO now to:

LTHOUGH Rolling Stones is simple in operation, the program is small and compact. Many important programming features are included and it is worth looking at even if only to learn a few of them.

The program has no subroutines yet closer examination reveals that it is in three distinct parts. First, lines 1 to 18 which set variables. Next, the main part of the program is really a large loop from lines 20 to 36. The last section deals with printing the dead man and the score.

As the program allows you to control a man with cursor keys 5 and 8, and a stone is falling, much of the program deals with controlling screen co-ordinates. Here is a description of the important portions:

The stone begins its fall at a random position at each attempt and that is set in line 14. Line 20 prints the stone and erases the position directly above it. Line 22 checks to see if you have missed the catch and, if you have, a jump is made to the section where the dead man is printed. If all is well, the program proceeds to line 24, where the line number of the stone is incremented. Lines 28 and 30 check the key being pressed and alter variable A which holds the position of the man.

The man is printed in line 32 and line 34 checks to see if you have caught the stone. Line 35 loops back to line 20, where all the checks are repeated.

Eventually you will miss the stone and a jump will be made to line 38. From there the dead man is printed in line 40 and your score in 44. Lines 46 to 54 check to see if you have achieved the high score which is printed. Note that this program can be run on the Spectrum with very little difficulty.

VARIABLES USED

A\$ Holds user's input.

H\$ Holds high score.

- A Holds the horizontal position of man.
- C Holds the line number where the stone is.
- HS Holds high score.
- Z Holds score.

ROLLING STONES

OU ARE standing at the bottom of a hill and must try to catch the stones rolling down. Use keys 5 and 8 to move as you attempt to catch the stones in your pouch.

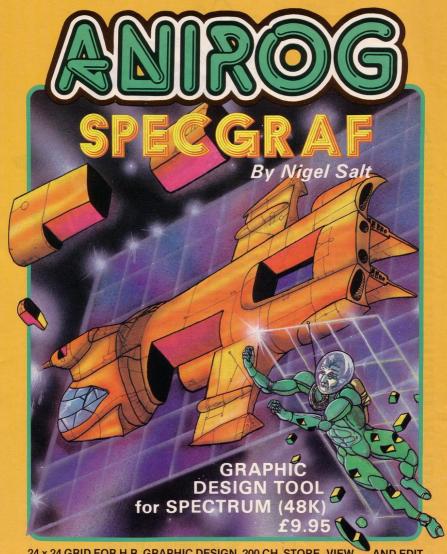

the stones in your pouch.

The graphics representation of the man is very good when the length of the

program is taken into account. There is also a facility for the name of the highest scorer to be entered.

Rolling Stones was written for the 16K ZX-81 by Richard Turner of Gorleston, Great Yarmouth.

PUT YOUR SPECTRUM TO WORK ON DAD'S INCOME TAX!

The easy-to-use Which? Tax Calculator helps ALL tax payers — not just Dad — and can save a lot of money too. Are you eligible for a rebate on your tax bill? The Which? Tax Calculator helps you find out — and tells you how much!

Specially developed by the Consumers'Association, this personal tax program for the Sinclair Spectrum reckons your personal tax accurately and automatically — taking you step-by-step through your tax form. You simply

Singlair

Sinclair Programs
196-200 Balls Pond Road, London N1 4AQ

answer the questions about job earnings, building society interest and other income. Then you enter your outgoings like mortgage, and allowances — and the program does the rest, showing your correct tax assessment, and size of rebates due.

So DON'T pay more tax than you need!

Here's an EASY way to pay only the right amount: send off right away for this comprehensive, fully documented package.

ADDRESS	

IT THE DESTROYER from your post by firing at it. The position of the destroyer will be shown on the screen and you must input the angle and strength of your shot. If you miss the destroyer and your shot stays on the screen the ship will launch a deadly missile at you but if the shot strays off the screen the destroyer will not return fire, although you will not score points. You have to defend yourself against 10 ships to gain top

High-res revolution has been achieved on ZX-81 computers

I AM writing to say how pleased I was when, a few weeks ago, I received a game called Forty Niner for the 16K ZX-81. When I LOADed it I nearly died of shock when I came to face a cosmic cockerel in hi-res graphics. The game is exciting and highly addictive and makes great use of high reso-

It has a hall of fame, five skill levels and lets users define their own keys for use. In case anyone thinks I am talking about a Spectrum game, I am not. This is definitely my favourite game for the ZX-81 and, to me, it is definitely my favourite game by miles no, light years.

Software Farm is the culprit behind this revolution. You can also be expecting new games in its high-res range. This is only number one. So, before you rush to buy your Spectrum, think first

It is difficult to explain this piece of excellence so, if you want to find how fantastic it is, buy it. If anyone can beat my brother's high score of 46,469, write to Sinclair Programs. My personal best is 39,896.

> Daniel Popplewell, aged 12, Bradford.

The Snowman

WELL DONE, Raymond Briggs and Quicksilva. Their game, The Snowman, deserves terrific success for having no violence in it. It always amazes me that orgies of mindless zapping and destruction can be the product of brains which can create highly-original machine code games.

An example is the game City Lander, which instructs

buildings as possible to clear a landing area. That printout was published in the Christmas issue of Sinclair Programs under the title Moscow Raid. Would it have been as readily printed under the title, say, Washington Raid?

Nick Thompson, Langport, Somerset.

Worm record WHILE READING the

April edition of Sinclair Programs I read the letter titled Worm record from Peter Clarke. He said he had scored 176,400 and reached level seven a second time. I recently scored which is a new record. I completed level seven five times and, at one point in the third round, I had five worms.

> Jenny Matthews. aged 13, Hoddesdon, Herts.

· Worm Game was published in the March/April 1983 edition of Sinclair Programs.

ZX-81 hardware

THANK YOU for a great magazine. I have never had a better computer magazine. The one thing which disappoints me, and I am sure many readers will agree, is that most of the advertisements are for the Spectrum.

In the December issue on page 15 it read "Sinclair Special Inside. New Interface Two and ROM cartridges. New Software"

Cartridges for my ZX-81, I thought, but when I turned to page 17 and read "The ZX Interface 2 is the latest new peripheral for the Spectrum" I was full of disappointment.

the player to bomb as many Because, as it was near to Christmas, I could have had one for my present as it was only £19.95. I am sure that it would not take much to make a game or interface for both a Spectrum and ZX-81. I think it would please many readers if Sinclair Research did that.

Freddy Powell. aged 13, Waltham Abbey, Herts.

 A spokesman for Sinclair Research said recently that there were no plans to produce new hardware for the ZX-81.

Worm again IN Sinclair Programs in

April, Peter Clarke said he had a new record on the Worm Game of 176,400. Recently I have achieved a new record of 439,870. I completed stage seven four times and reached stage four on my fifth lap.

Lee Gordon, aged 14, Plymouth, Devon.

Scrolling

I OFFER a POKE command which scrolls one line on the Spectrum screen over and over again:

10 FOR n=1 TO 255 20 POKE 23606.n 30 PRINT AT 10,0; "ABCDEFGHIIK lmnopqrstuvwxyz"

40 NEXT n 50 GOTO 10 David Pankhurst,

Stroud, Kent.

Zap record I HAVE beaten the best time

for the game Zap-Zap, which is 36 set by Andrea Woobery. The time I have set is 31 time

I have had my ZX-81 since October, 1982 and I have written a few adventure

games for the 16K and two 1K games since then. I am hoping to upgrade to a Spectrum soon.

I think Sinclair Programs is ace and I buy it every month. Denis Butler. Fakenham, Norfolk.

Slow loader

PLEASE inform F Jugg -Sinclair Programs, April that the Slow Loader works. We have 16K ZX-81 programs operating perfectly on our 48K Spectrum, thanks to Slow Loader.

I think perhaps he has not tried a low volume setting. The volume control on my recorder runs from one to 12. The volume at which the Slow Loader works is just less than one - yes, one. He may at first get garbled versions. He should make minor adjustments to the volume systematically until translation is perfect.

G L Budden. Burnham-on-Sea, Somerset.

ZX pen-friend

I AM Brazilian and a ZX-81 owner and I like Sinclair Programs. I have 300 programs, games and others, and I should like to exchange programs and information with British people.

I should like to know about the Sinclair User Group and if I could be a part of it.

Andre Koch Zielasko Av. Emancipação 403 sala 2 Tramandai - RS - 95590 - Brazil.

Binders

I FEEL your magazines are very good and think they are getting damaged on the shelf @ at home and am wondering if you could produce a strong binder to protect them - a binder which holds 12 copies like the ones for other magazines. The binders could have the volume number and the name on it.

> J Bentley, Plymouth, Devon.

Enjoyable version of an old racing favourite

NIGHT DRIVER provides its players with a birds-eye view of the car to be controlled. The aim is to drive the car round a complicated circuit. Controls are accelerator, brake and steering to left and right.

The road is very narrow and attempting to remain on it at speed is no simple task. Learner option allows players not to lose a life when they steer off the road but limits time allowed to complete the circuit. That time is short and any player who can negotiate the course at sufficient speed to complete it in that time should choose the professional option.

Professional limits players to five lives, one of which is lost whenever the car is steered off the road. Beginners will find it difficult to move more than a few inches without losing all five.

Automatic option allows the computer to guide the car round the course. It gives some idea of what the course is like, how long it is, and where the most difficult bends and obstacles are.

Racing car games are not new but this is a difficult and enjoyable version. Knight Driver is produced for the 48K Spectrum by Hewson Consultants Ltd, 60a St Mary's Street, Wallingford, Oxfordshire and costs £5.95.

Study software

PENGUIN Study Software has released a range of study cassettes for people studying the Shakespearian plays Macbeth, Twelfth Night, Romeo and Juliet, Julius Caesar, The Merchant of Venice and Henry IV part one. One cassette is dedicated to each title and the cassettes reviewed by Sinclair Programs were Romeo and Juliet and Julius Caesar.

The programs make use of the computer as a database from which information can be called-up under subject headings or cross-referenced and compared. Searches for references can be made under character or theme headings and limited to specific acts or carried across the entire play.

Summoning-up references to two or more subjects together can suggest themes or images in the play which have not been noticed previously. When This month we focus on a selection of games and on the new range of software for students of Shakespeare from Penguin Books

a reference is shown on-screen, the other headings under which it could be classified are given, so that a student can choose to change the direction of the search.

Students are referred to specific act, line and scene numbers in The New Penguin Shakespeare version of the play. Information on-screen acts as a gloss or comment on the lines mentioned and is designed to make the student think more carefully about those lines. Questions raised by the program are not answered in it, so the program would be most useful when used with guidance by an experienced teacher.

The cover specifies that the cassette can be used by O level and CSE students. Points raised by the program and its cross-referencing system would be useful to students for those examinations and also to A level students.

The cassettes are £5.95 each and are produced for the 48K Spectrum by

Penguin Books Ltd, 536 Kings Road, London SW10.

Blue thunder

THE AIM of **Blue Thunder** is to steer a jet helicopter across the sea and islands, avoiding all attacks from enemy missiles and barrage balloons, to reach and destroy the nuclear reactor and thus rescue your comrades who are trapped there.

The graphics are very well done. As the helicopter moves, so the landscape scrolls smoothly across the screen. The helicopter movements and changes in direction are equally well-displayed.

The game, however, is unexciting. After a few runs the majority of attacks become predictable and it is possible to reach the nuclear reactor by moving upwards, waiting the appropriate length of time and then flying left. That is a useful facility for those who are trying to eat their lunch, or drink a cup of coffee, or do anything else while playing the game, but for those who require a game to be interesting throughout it is a major disadvantage.

Blue Thunder is produced by Foundry Business Systems Ltd, 2 Station Road, Walsall, West Midlands WS7 0JZ and costs £5.95.

Dr Franky

THE PLAYER takes the part of **Dr** Franky who is trying to bring his monstrous creation to life. To do it, flasks of life-giving chemicals must be collected from one side of the dungeons and carried to the monster on the other side. Of course, in a computer game things are never so simple. Dr Franky is being chased by the ghosts of his previous victims, the floors of the dungeons are riddled with holes, and crossing the dungeons involves jumping on and off a very unsafe lift.

The game is fast and furious, for the ghosts seem to be everywhere at once, so, for some time, it can be difficult to decide how to move more than a few inches without being killed. The screen layout, the ghosts, the difficulties of the game are not startlingly original.

Nevertheless, despite the air of deja vu which many buyers will feel, the

Softfocus

game provides a real challenge even for the most experienced arcade games player.

Dr Franky is produced for the 48K Spectrum by Virgin Games Ltd, 61-63 Portobello Road, London W11 and costs £5.95.

Jokers Wild

JOKERS WILD is divided into two sections — adventure and action game. To play the adventure, skill level four of the action game must be reached. At the end of each skill level, clues for the adventure are provided, all of which remain obscure until the adventure is reached.

Novel features of the action game are the compression of the maze format into a grid, making it much more difficult to become accustomed to the maze layout; the fast-moving — but predictable by the very alert — movement of the knaves and the provision of a separate adventure game, as a reward for the skilful player.

Jokers Wild is produced for the 16K or 48K Spectrum by Phoenix Software, Tel: 01-868 3353 and costs £9.99.

The Skull

THE SKULL, by Games Machine, appears to be a three-dimensional version of Pac-man-type game. The aim is to move round a three-dimensional maze, amassing points by collecting as much treasure as possible.

Also wandering round the maze are a series of large skulls, which will kill the hapless player who meets them. They can be killed only if the player has recently picked up a cross.

The maze is on several levels. Movement from one to another is by accident through a broken trapdoor, or by design down a ladder.

The graphics and screen layout are good, the movement is smooth. Maze games, however, both two- and three-dimensional, have become commonplace on the Spectrum and The Skull has no features which make it stand out from the other games of its type.

The Skull is produced for the 48K Spectrum by Games Machine Ltd, 40, Fretherne Road, Welwyn Garden City, Herts AL8 6NU and costs £6.95.

Oracle's Cave

ORACLE'S CAVE is a superb animated adventure for the 48K Spectrum. The player's quest is to negotiate the **Oracle's Cave** complex, find the chosen quest item, collect four items of treasure, kill the oracle and escape.

Each movement through the caves is shown on-screen, in a display which scrolls smoothly from left to right and up and down. The screen display is divided into several areas — a map of the cave showing areas which have been explored and which do not contain monsters; a list of options open to the player; a response to the player's last choice; a chart showing the player's progress; and the display of the action.

The game has a time limit of five days, which means that the player must always clock-watch and avoid taking too many rests. The time limit means that the game never continues for too long and it can easily be played several times in one session.

Playing the game several times is important, since there are several strate gies to be worked out. It is important to collect sufficient weapons to be able to escape to freedom, to know where the most valuable treasure can be found, and to know when to explore and when

not. The key is important, so do not try to finish the game without it, or you will never see the blue sky and the mountainside outside but will perish in the caves.

Oracle's Cave is produced for the 48K Spectrum by Doric Computer Services, 3 The Oasis, Glenfield, Leicester and costs £7.95.

Colditz

FULL MARKS to Phipps Associates for providing reviewers with a map of locations in its latest adventure game, Colditz. The map shows that escape from the German prisoner-of-war camp is possible but that there are numerous problems to be faced en route.

The game combines graphics and text to provide a clear description of the player's situation at each point.

The text often includes the sound made at a location and it is best to pay close attention to those descriptions, as any loud noise can alert the guards to the fact that a prisoner is trying to escape.

There are many objects to be collected and used, which creates problems, because there are limitations as to how many objects a player can carry.

Never assume that because everything which has been found cannot be carried at once that it is not all useful.

The game contains plenty of action. There are guards to avoid and kill, tunnels to dig, wire to cut, a prisoner to rescue, and the final challenge of making sure that the guards cannot follow once the escape has been effected.

It is an excellent adventure, well worth the time required to complete it. Colditz is produced for the 48K Spectrum by Phipps Associates, 172 Kingston Road, Ewell, Surrey KT19 0SD and costs £6.95.

Taking the easy route to better programs

Games Designer, Hurg and The Quill allow beginners to produce machine-code games. We look at these three programs in detail.

ROGRAMMING a Spectrum with an original game is not difficult. Simple games can be written within hours of first using a computer, with the knowledge gained from reading the first chapters of the manual.

When those games are compared, as they are bound to be, to professional software, they are found to be sadly lacking. The graphics are unsophisticated, the sound is unexciting, and the speed is slow. As original home-made creations they have their charm but many programmers find themselves wishing they knew an easy route to machine code and good programming.

It is for everyone who ever wished they knew such an easy route that three programs have been put on the market.

The Quill by Gilsoft, Games Designer from Software Studios and Hurg from Melbourne House are all easy routes to professional-style games programming.

Games Designer is complete with eight pre-recorded games which have been written using the designer pro-

While playing the games, common themes become apparent. Each consists of one creature/object, defending itself by destroying attacking waves of other objects/creatures. Each creature is a sprite graphic; that is a graphic which is much bigger than a user-defined graphic and which moves smoothly across the screen as a whole. The movement is smooth and fast and the sound is not a series of beeps, as in a Basic program, but a variety of rising and falling machine-coded noises.

Menu-driven

Games Designer is menu-driven and arrives with a short instruction booklet. The main menu allows the user to load, save or play a game, to change the game being played, to alter the sprites, their configuration, their movement and the attack waves. Once one of those options has been chosen, a secondary menu or some other list of options is displayed.

The configuration option on the main menu produces a variety of options. The background or foreground colour of the screen during the game can be changed, sounds can be defined, and the general format of the game can be changed. Game formats are based on existing types of game. The choices are

Invaders-type, Asteroids-type, Scramble-type and Berserk-type.

Two hours only

Games Designer is fairly simple to use and a first game can be completed in two hours. Once each section of the program and of the instruction manual has been understood the program can be used easily and machine-coded games can be designed quickly and efficiently. A major difficulty is that the games are all of the same type and that it does not take long for the format to become uninteresting.

The Hurg package is complete with three games designed with its help. They show far more variety than those in the Games Designer package. One is a version of Pac-man, while the other two are unlike other games on the maket. The games feature animated sprite graphics, including a manic koala bear, complicated screen layouts and a variety of scoring procedures.

The catch is, of course, that no games design program, however good, can do all the work and there is a great deal for the player to do before a professional-looking game can be produced. Each sprite graphic must be designed, the screen layout must be produced, complete animation cycles in all directions must be devised—the list goes on and on.

Bewildering variety

With so much to do and so many options in it, Hurg necessarily contains a bewildering variety of menus, within which it is easy to become lost. The instruction manual is not nearly clear enough and leaves much to guesswork. Despite the comment at the beginning of the booklet that "any combination of options can make a valid game", a large variety of combinations can produce nothing like a valid game.

At the end of the instruction booklet, hidden in Appendix A, are the instructions which would best be given at the beginning of the manual, on how to find and use the correct menu at the correct time and thus write a simple Hurg game.

The first step is to re-set Hurg and thus clear any previous attempts at games. The next stage is to create the background which will appear on-screen. That should be designed separately and LOADed into the main program at that point. There is no help with design, although it is suggested that the program Melbourne Draw could be used.

It would have been more helpful to let users know before they LOADed the main program that the screen design should be completed previously. Users without Melbourne Draw will find that some knowledge of Basic programming is needed to create a satisfactory background.

Designing the player's character is done in a sub-menu. The character can be a variety of sizes although, at first, it is best to follow the instructions and create the simplest possible character of the size two columns by two rows. As in

Soft Theme

Games Designer, a grid is supplied on which characters can be designed quickly and easily.

The design menu is slightly confusing. If you have chosen an animation

count of 2, as suggested in the booklet, the program will expect you to design two characters. The game will then use those characters alternately to produce an animated effect, so designing, for example, a lettuce followed by a cricket bat, will quickly prove a strain on the eyes. The easiest shapes are lines and crosses of varying lengths and sizes, for they give an effect of animation quickly and easily.

Once the player has been defined and modified, the first alien can be produced in the same way and the fire button action can be chosen. Any other necessary aliens can be defined. The game will probably, at that point, resemble a machine-coded version of a beginner's Basic game — very crude, undeveloped and probably not very exciting.

Effective aid

Users who reach that stage will already have spent some hours using the program, criticising the very sketchy instruction booklet and sorting-out one menu from another. Hurg is a very effective tool for producing games but it is not as simple to use as the publicity suggests. It seems likely that people who have the time and patience to learn to use it will also be those who have the time and patience to use machine code.

Nevertheless, even to people who can use machine code it would be useful for trying ideas. If Melbourne House were to produce a better instruction manual, preferably with a detailed breakdown of how one of the pre-recorded games was created, together with diagrams, Hurg would be unbeatable value.

Hurg allows users to produce any arcade game for the Spectrum. The Quill by Gilsoft enables users to produce any text-only adventure. Gilsoft also allows users to market games produced in that way and a number of games already on the market were written using it.

As with Hurg, The Quill very quickly makes it clear that the user cannot expect something for nothing. An adventure contains a large number of location descriptions. Each of those must be typed into the computer. An adventure has a large vocabulary and each word to be understood must be entered. Most important, everything which the adventurer asks the computer to do must provoke some response and each of those responses must be entered.

The manual explains in detail how to create a very simple adventure, which involves exploring a house, opening a safe, removing a jewel and taking it to the correct part of the house. That is a very short adventure, with very few locations and very limited vocabulary.

Ten options

To create your own adventure of that size, using The Quill would take some five hours' work. The sheer volume of information to be entered means that, even when the user knows exactly what

to enter, and has already debugged it, an adventure of that size would take around an hour-and-a-half to enter, longer for inexperienced typists.

Ten options in the main menu are those used to create the main body of the adventure. The vocabulary table must contain every word which the program will be expected to understand. Adventurers who have been puzzled when a location description in an adventure contains words which the computer does not understand will see that the reason is that the location table is different from the vocabulary table. Each word in the vocabulary is given a number. Synonyms, such as UP, U and ASCEND, are all given the same number, so that they will all be treated in the same way by the computer.

Provoke responses

The words with the lowest numeric values in the vocabulary table are treated by the program as directions, so that they provoke the response "I can't go in that direction" if they cannot be used in a location. Words with higher numeric values provoke the response "I can't" when used at the wrong time.

The object table is separate from the vocabulary table. It must include every object to be used, e.g., sword, food, light. Object zero will always be treated by the program as a source of light, a torch for example, which will illuminate dark places. Some objects which seem the same must be listed separately. The open safe and the closed safe are treated by the computer as two different things, as are the torch and the lighted torch.

Once objects have been entered, the text for each location should be entered. Locations, like objects and vocabulary, are all given numbers. Objects can then be given a start location, which tells the computer in which room to place them. Some objects, such as the lighted torch, do not have a start location and must be defined as not created.

Draw a map

When creating an adventure it is best to begin with a map, which will serve as a reminder of where everything is. It is also useful to write on paper exactly what has been typed into the database. In that way, if the spanner is to begin life in the living room it is not necessary to refer to different tables to find that the spanner is object one and the living room location 20.

The Quill is an excellent program which enables patient users to produce thought-provoking, professional adventures. It also provides valuable insights into how adventure games are put together. By using the program for a few hours it is possible to learn a good deal about how adventures are created and how they can be solved.

LANGUAGE LEARNING AIDS FOR FRENCH, GERMAN & SPANISH FOR BBC(32K) • ELECTRON SPECTRUM (ABK)

As used in numerous schools and colleges these programs provide a highly successful aid to modern language learning. Each cassette contains a ophisticated control program and a comprehensive series of vocabulary lessons which can be used in a variety of self-paced learning and test modes. Words, phrases et an edisphayed with all necessary acceints and special calications, different colours are used for maculine. Infimiting and neutrous to assign gender learning.

The programs are suitable for beginners, 0-level and beyond as simple commands enable new lessons in vocabulary or grammar to be created by the user, edited as required, then permanently saved for later use. Invaluable for homework and exam revision!

Two cossettes are available for each language, together these contain a vocabulary of thousands of words: Level A provides 16 lessons in general subjects; Level B provides of urther 16 lessons including adjectives, adverbs and fully conjugated verb lists.

Available from your computer store or by mail order Price \$9.95 Also Available "ANSWER BACK General Knowledge Quiz" Price £10.95

MAIL ORDER PROTECTION SCHEME

Advertisements in this magazine are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is sought in advance of the despatch of goods the Code requires the advertiser to despatch goods within 28 days, unless a longer period is stated. Where goods are returned to an advertiser, undamaged, within 7 days, the purchaser's money must be refunded, plus the cost of returning the goods. The reader should retain evidence of despatch.

If you order goods from mail order advertisements in this magazine and pay in advance of delivery you will be considered for compensation under the Scheme if the advertiser becomes insolvent or ceases to trade provided that:

(a) you have not received the goods, or a refund in respect of returning same, AND:

(b) you write to the Advertisement Manager of this magazine, stating the facts, not earlier than 28 days from the date of the order and NOT LATER THAN THREE MONTHS from the date on which the advertisement ap-

THE SCHEME ONLY COVERS ADVANCE PAYMENT SENT IN DIRECT RESPONSE TO AN ADVERTISEMENT IN THIS MAGAZINE. IT DOES NOT COVER:—

(a) Classified advertising;

(b) payment made in response to catalogues, brochures, etc. received as a result of responding to such adver-

etc. received as a result of responding to such advertisements;
(c) advertisers offering services as opposed to goods,
(d) claims where payment is made with Access or

Barclaycard and where the cost of the goods is over £30. In this case claims should be made to the Credit Card Company concerned.

Full details of the Scheme are available by sending a stamped and addressed envelope to Mail Order Protection Scheme, Periodical Publishers Association, Imperial House, Kingsway, London WC2B 6UN.

MACHINE CODE TEACHER FOR THE 48K SPECTRUM

Imagine a program that can tell you the meaning of every machine code word and what you should type to get the computer to do each command.

This program along with its instruction booklet can teach complete beginners or semi experts and is now available from Peekay Software for just £6.95. Write for more details

If it takes decisions then it is programming

This month David Janda explains how your computer can compare information and make a decision based on its findings.

HAT IS a programming language? Or to put it a better way, what qualifies as a programming language? The answer is the ability to program tests and act on them. That is the fundamental power behind all programming languages and it enables us to program computers to take different courses of action.

For a better idea, you should look at a Basic program in two ways — first its physical layout and then its logical one. Program one asks the user to enter two numbers which are then added, subtracted and multiplied by each other and the results are printed.

Note that there are no decisions in the program and the logical flow of control is from the top to the bottom. That means that type of program is not very flexible. You can perform only set operations on data such as our two numbers.

Control constructs

Program two, on the other hand, is different. We have introduced the IF condition(s) THEN action construct, so we can start to test the data entered and then perform operations exceptional to the test. Two important things should be noted. First, the program logic is still sequential, from top to bottom. Second, the action part of the IF is limited so it is best to make good use of it.

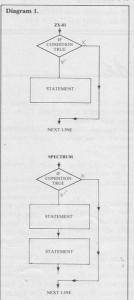

The third example shows how best the IF. THEN. . construct can be used. Instead of using it to make a decision on some set of data and then perform one action, using GOSUB and GOTO after the THEN means that you can jump conditionally to another part of the program where a group of actions can be executed. That group of actions could even include more conditional jumps.

The Sinclair machines do not offer many control constructs; we have the bare essentials. It should be noted that although other Basics, such as BBC Basic, offer more structured and flexible control constructs, it is possible to emulate many of them in Sinclair Basic.

For the ZX-81, the IF statement takes the form of IF condition(s) THEN action. So far as branching is concerned, GOTO and GOSUB are provided as a means of passing control to other parts of a program. A third method of passing control is provided in the form of USR. That is very similar in operation to a machine code program and, after the program is finished, control is then passed to the next line of Basic.

USR can be used to return a value to the Basic program. That is achieved by calling a machine code program with: LET A=USR n

where A is a numeric variable and n is

the address of the machine code program. After the machine code is finished and control is returned to Basic, the variable will contain the value of the register pair BC on return from the machine code program.

That may not seem to be of much use at first but if you have a super-fast random number routine in machine code you can load BC with the number and, on return to Basic, your selected variable will hold the number.

Machine code

That applies to the Spectrum with these differences. First, because multiple statement lines are allowed for on the Spectrum, it is possible to have more than one action after the THEN statement. That is useful if you wish to do two things and it can save some space. Second, do not be confused with the USR function on the Spectrum; it has two purposes—first to call a machine code program and second in defining user-definable graphics.

So what exactly is a condition and what has it to do with decisions? First, it is best to look at the whole structure of the IF. THEN. ELSE construct. When the program reaches a line such as IF A=B THEN. . it performs tests to see if A equals B. If A does not equal B, the rest of the line is ignored completely and the program drops to the next line. That applies to Spectrum owners who have a number of statements after IFs. This example explains things a little:

10 LET A=1

20 IF A=2 THEN PRINT A: PRINT "OK" 30 PRINT "THE NEXT LINE"

When run the test will not be true so that A will not be printed, neither will 'OK'. Program control will pass to the next line in the program. Diagram one shows a flowchart for the ZX-81 and Spectrum IF; notice that the only difference is that the flowchart indicates that the Spectrum can have more than one statement after the IF.

The conditions in an IF statement are a little more complex. In a condition the computer is not looking to see if A*10 = 1 or if "BILL" < "John"; what it is doing is performing a comparison test

Program Tutor

Program 1. 10 REM SEGUIENTAL PROGRAM 20 PRINT "ENTER A NUMBER" 30 INPUT A 40 PRINT "ENTER A SECOND NUMBER" 40 PRINT "ENTER A SECOND 50 INPUT B 60 PRINT A;"-";B;"=";A+B 70 PRINT A;"-";B;"=";A+B 80 PRINT A;"x";B;"=";A+B

which can yield one of two results, true or false. Or, to put it more accurately, '1' or '0'.

That applies not only for simple tests such as A = B but also for more complex ones such as IF A=B AND C=D THEN. . . Again, even though there are two tests, there is only one result.

For those who have never suffered Boolean algebra and truth tables I must tell you that a little understanding of the subject is necessary.

Computers are very logical, so when a comparison is made, there is only one result, true or false. In other words it is either equal to something or it is not; it is either less than something or it is not, and so on. There are no halfway houses.

If we take that point and say that true=1 and false=0 we can draw a truth table:

Condition Condition

Once you have digested the foregoing consider what happens when you have a condition with a logical operator-AND, OR, NOT-in it. Let us assume we have four variables A, B, C, D. A=1, B=1, C=2 and D=3, so look at the test: IF A=B AND C=D THEN. First the test on A and B is performed and they are equal so the result is true,

Next the test on C and D is performed and the results are not equal so

Program 2.

- 10 REM SEQUIENTAL PROGRAM WITH DECISIONS 20 PRINT "ENTER FIRST NUMBER"
- 30 INPUT A 40 PRINT "ENTER SECOND NUMBER 50 INPUT B
- 50 INPUT B 60 IF A-B THEN PRINT "THE NUMBERS ARE EQUAL" 70 IF A'B THEN PRINT A;" IS SMALLER THAN ";E 80 IF A'B THEN PRINT A;" IS LARGER THAN ";B 90 STOP

the result is 0. Looking at both tests, we have 1 AND 0; the condition is then false because AND requires both tests to be true. If everything is true, THEN can be executed, so:

IF false AND false THEN false IF false AND true THEN false

IF true AND false THEN false IF true AND true THEN true.

Program 3.

10 REM DECISIONS AND BRANCHING 20 LET R=INT(RND#100) 30 LET T=0 40 PRINT "I HAVE THOUGHT OF A NUMBER" 50 PRINT "UNDER 100" 60 PRINT "TRY TO GUESS MY NUMBER" 70 PRINT BO GOSUB 200 120 GOTO 80 199 REM FROM LINE 80 200 REM ZX-81 INCLIDE SCROLL HERE 210 LET T=T+1 220 PRINT "ENTER YOUR GUESS" 230 INPUT G 240 RETURN 299 REM FROM LINE 90 300 PRINT "WELL DONE," 305 PRINT "GUESS ";T;" IS RIGHT" 310 PRINT "MY NUMBER WAS ";G 320 STOP 399 REM FROM LINE 100 400 PRINT "MY NUMBER IS BIGGER THAN "IG 400 PRINT 410 RETURN 499 REM FROM LINE 110 500 PRINT "MY NUMBER IS SMALLER THAN "IG 500 PRINT "MY 510 RETURN

You should be able to see that the third test is the same as the example.

Finally, remember that tests can be made on any data using the operators available on the Sinclair machines. Multiple tests are possible using AND, OR and NOT as well as the operators, so it is possible to test for many conditions in only one line, after some prac-

Course Guide

EACH MONTH from now, Sinclair Programs will publish a list of computer courses of interest to readers. Courses with priority in this section will be those aimed specifically at Spectrum, ZX-81, ZX-80 or QL users, courses in Basic, Z-80 machine code or Forth, and general introductions to computing.

If you run such a course please write to us with full details at 196-200 Balls Pond Road, London N1 4AQ. Details should include the name and duration of the course, where and when it will take place, price, any qualifications needed to begin the course, and the extent of access for the disabled.

Aylesbury Computer Club, c/o 12 Long Plough, Aston Clinton, Aylesbury, Bucks holds Basic and Z-80 workshops at many of its weekly meetings at Quarrendon School, Aylesbury on Friday evenings, beginning at 7.30pm.

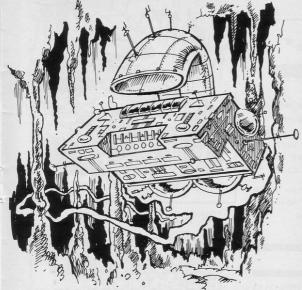

Grange Adult Education Centre, Aylesbury, tel: 0296-27342 and the Quarrendon Adult Education Centre, Aylesbury, tel: 0296-28551, both run five- and 10-week evening courses on introductory Basic programming and advanced Basic programming. The courses cost approximately £7.50 for five weeks and £15 for 10 weeks.

The Prettygate Centre, Office and Activity Centre, The Philip Morant School, Rembrandt Way, Colchester CO3 4QS, tel: Colchester 77458, runs a computer club on Tuesdays from 7.30 to 9.30pm which alternates with a tutor-led course. The standard course is of 12 hours and forms an introduction to Basic programming. Fees are 85 pence per hour; pensioners and under 18s pay half-price and those in

receipt of benefit pay 21 pence per hour.

MSS Services Ltd, PO Box 31, Worthing, West Sussex, tel: 0903-34755 runs a number of computer courses, many of which are aimed at members of specific professions. Programming in Basic will run from June 4-6 and will cost £275 plus VAT plus £15 registration fee. Microcomputers - Crash Course will be held on June 11 and will cost £130 plus VAT plus £15 registration fee. Programming in Basic is from June 18-21 and will cost £320 plus VAT plus £15 registration fee.

City of London Polytechnic, Short Course Unit, 84 Moorgate, London EC2M 6SQ, tel: 01-283 1030 will be running An Introduction to 6502 assembly language programming on June 6 from 6-8.30pm. At the end of the evening, students should be able to write machine language programs, programs which may stand on their own or perform utilities called from programs in Basic. The cost is £35.

CAVE FLIGHT

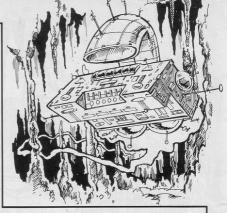

RAVEL through the cave avoiding the stalactites and stalaurities and docking for fuel when necessary. You have to reach the exit sign to get to the next level. Occasionally you will be subject to an attack but if you survive you can continue your journey. Your fuel, which will be high, medium, low or almost empty, is displayed on-screen at all times. If you choose to play a faster game your score will not be shown although it will be given at the end of the game. Use "Q" to move up and "S" to move down.

Cave Flight was written for the 16K ZX-81 by Paul Metcalfe of Hindhead, Surrey.

SING the "d" key you have to drop mail sacks on to North Sea oil rigs from a helicopter. There are 20 sacks to be dropped and each must land in the centre of the rig to count as a delivery. Oil Post was written for the 16K Spectrum by Robert Beiley of Billericay, Essex.

HIRE SPECTRO

CHOOSE FROM OUR VAST RANGE

FREE 26 page CATALOGUE with full details of our range of over 280 different programs for the ZX SPECTRUM. All hired with the consent of the publishers. Whether you prefer to ZAP aliens, get lost in an ADVENTURE game, EDUCATE your children, CALCULATE the family finances or COMPILE machine code programs WE HAVE THE RIGHT TAPES FOR YOU TO HIRE.

FAST SERVICE

We stock up to 60 manufacturers' original copies of each tape (over 3000 tapes in stock), and can normally despatch your tapes the day we receive your order, and we always use first class nost

LOWEST PRICES

We believe our prices are the lowest of any library, yet we offer the LARGEST range of titles. Hire up to 3 tapes at a time, for 2 weeks, for only £1.07 each (inc. VAT & p&p).

FREE TAPE HIRE

For a limited period, we will send your first tape (your choice) FREE, so join our library now. You can't afford NOT to! If you've tried another library and are wary of our claims send a stamp and we'll gladly send you a copy of our catalogue - we're confident you'll join when you see it!

lenclose cheque for £6.00 for LIFE MEMBERSHIP and I understand that my first tape hire will be FREE. If, within 28 days, I'm not delighted with your service you'll refund my membership fee

EARTH DEFENCE

PREVENT the fast-working aliens from building 250 bases in the sky by hitting them with your missile. Each missile is released automatically but needs to be guided into the aliens using keys "5" and "8". Ten bases are destroyed for each alien hit.

Earth Defence was written for the 16K Spectrum by Marc Fanciullacci of Ickenham, Middlesex.

entertainment. Learn a language. Check share prices.

The choice is simply vast.
Plus, your Prism VTX 5000,
allows you to communicate directly
with other Spectrum owners.

And now, our special offer means that you can do all this for just £11* amonth. So complete the coupon and send it to us today, and we will let you have full details of our unbeatable offer.

*All prices quoted refer to domestic use only. For business use the Prestel annual standing charge is £66. Therefore business users will be billed £44.50 per quarter.

FOR JUST £11*A MONTH YOU WILL GET:

- A Prism VTX 5000 worth £99.95.
- One year's subscription to Prestel worth £20.00.
- One year's subscription to Micronet worth £32.00.
- Free user-to-user software normally retailing at £19.00.
- Quarterly hardware and software offers.
- Discounted software through Micronet (up to 20% off retail prices).

Prestel and the Prestel symbol are trademarks of British Telecommunications.

To date, Atari's most astonishing game is Pole Position... If you are only going to buy one game, then this is the one you should get.

COMPUTER & VIDEO GAMES.

...Pole Position gives a very strong sense of speed as you hurtle round the track. The super-realism of the three-dimensional effect adds a lot to the game. It is a great graphics demo.

PRACTICAL COMPUTING.

Brilliant!
WHICH MICRO? AND SOFTWARE REVIEW.

...a terrific version of the arcade motor racing game...graphics are superb...sound, too is very good as brakes screech and engines rev-up.

PERSONAL COMPUTER GAMES.

Exciting, exhilarating, excellent, Pole Position takes the lead as the best Atari race game around.

PERSONAL COMPUTER NEWS.

What can we say?

We're overwhelmed. Though we should just add that with Atarisoft, you can now play Pole Position on the Commodore 64, BBC and Spectrum computers, as well as on all Atari® POLE POSITION systems. Oh, and we're giving away free a Grand Prix kit and full colour wall chart with every game.

NAME TAG

5.255.255

THEN USED in conjunction with the ZX printer, Name Tag can be used to produce tags or labels. The program draws the perimeter of a label complete with a car logo. All users have to do is input the name, middle name and surname and the program will centre them on the label. The finished tag can then be copied on to a printer.

Written for the 16K Spectrum by A A Paine of Brunham-on-Crouch, Essex.

Little Brothers should be seen but not heard.

A maxim which eloquently describes the Brother HR-5.

Less than a foot across, it's nonetheless loaded with features.

But there's one thing the HR-5 won't give you. Earache.

For the annoying 'clickety clack' many printers produce is mercifully absent from the HR-5.

Quietly efficient, it delivers high definition dot matrix text over 80 columns at 30 c.p.s.

The HR-5 also has something of an artistic bent. Being capable of producing uni-directional graph and chart images together with bi-directional text.

It will also hone down characters into a condensed face, or extend them for added emphasis.

Incorporating either a Centronics parallel or RS-232C interface, the HR-5 is compatible with

most home computers and popular software.

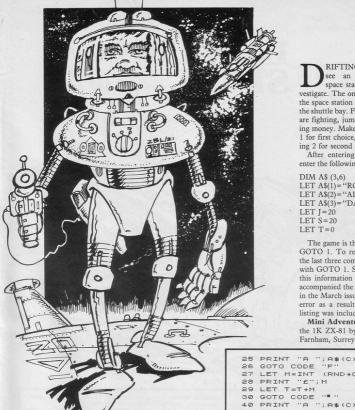

Perfectly portable, the battery or mains operated HR-5 weighs less than 4lbs, and has a starting price of only £179.95 (inc.VAT).

Which is really something to shout about.

PLEASE SEND HR-5 PRINTER.	ME MORE DETAILS OF THE REMA	ARKABLE BROTHER

RIFTING through space, you see an apparently deserted space station and decide to investigate. The only way to escape from the space station is to find your ship in the shuttle bay. Features of the program are fighting, jumping gaps and collecting money. Make decisions by pressing 1 for first choice, or yes, and by pressing 2 for second choice, or no.

After entering the program listing, enter the following as direct commands:

DIM A\$ (3,6) LET A\$(1)="ROBOT" LET A\$(2)="ALIEN" LET A\$(3)="DALEK" LET J=20 LET S=20 LET T=0

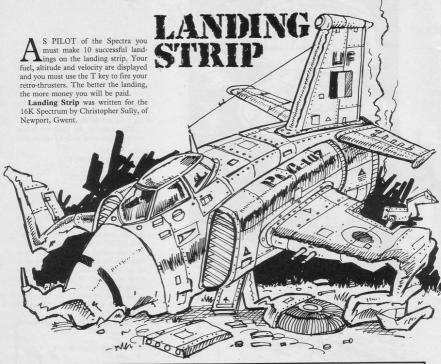

The game is then started by entering GOTO 1. To re-start the game, enter the last three commands again and start with GOTO 1. Some readers may find this information similar to that which accompanied the Mini Adventure game in the March issue. That was due to an error as a result of which the wrong listing was included.

Mini Adventure II was written for the 1K ZX-81 by Russell Wooberry of Farnham, Surrey.

UNDERSTANDING 22 ANGLES

NDERSTANDING ANGLES is an educational program for children of junior school age. The program is split into four categories and they include drawing angles, guessing the size of an angle and guessing compass points. If incorrect or inaccurate answers are given, the computer will tell you what the compass point is or draw a diagram if you give an incorrect answer in the angles section.

Rolling Stones was written for the 16K ZX-81 by Ian Thom of Allestree, Derby.

SOFTWARE!

FOR SPECTRUM 48K

CONQUEST A tactical game which even veteran

players will find both challenging and rewarding. Mediterranean Europe is divided into grid squares. Your aim, as Emperor, is to gain 100 squares of territory as quickly as possible - at the same time dealing with Barbarian counterattacks, plagues, civil war and rival Emperors.

5 levels of skill, plus a continuous 'Conquest' game where all the difficulty levels are thrown in together.

3D BAT ATTACK An all action, 3 dimensional maze game where you gather up blocks of gold, at the same time pitting your wits against vicious vampire bats whose only purpose in life is to locate, hunt and kill you.

4 levels of skill. At each level the game gets faster and more complicated, and the vampires more dangerous.

FTERTHE

Are you ready for CheetahSoft? There's only one way to find out. But be warned: these vampire bats know a good meal when they see one. And our friend with the heetahSoft

scythe has had years of experience...

So don't play unless you're ready to play the game for real. Because you'll find there's one sure thing about CheetahSoft: Soft we're not.

£6.95 at all good stores.

Soft we're not 🍇

We're sorry you've had to wait so long for our first new release of 1984 but your patience will be well rewarded. From Bob Hamilton, author of 'The Pyramid' and

'Doomsday Castle' we present BEAKY AND THE EGGSNATCHERS and introduce Beaky, our new star of the video-game screen.

(Ziggy is having a well earned rest!)

Beaky belongs to the family of Andromedan Armed Condors, the rare goggled variety.

evil band of creatures known collectively as the Eggsnatchers. Their sole malicious intent in life is to extinctify Beaky's species by stealing or destroying the eggs by any foul

means available.

REAKY and the Egg Snatchers

Spectrum 48K and **Commodore 64**

Your objective is to try and brood, hatch out and rear as many little Beakys as possible through 12 different screens of formidable but delightful arcade action.

FANTASY SOFTWARE Is available from W.H.SMITHS, JOHN MENZIES, BOOTS, WOOLWORTHS, LASKYS, GREENS, RUMBELLOWS, SPECTRUM GROUP and all other good software retailers.

Beaky and the Eggsnatchers is available for 48K Spectrum and Commodore 64 at £6.50 on cassette or on disk for the Commodore 64 at £9.50 from FANTASY SOFTWARE, FAUCONBERG LODGE, 27A ST GEORGES ROAD, CHELTENHAM, GLOS GL50 3DT despatched by return first class post together with free membership of the Fantasy Micro Club.

Trade Enquiries welcome – telephone 0242-583661.
